

VISION

IP CCTV Services Bundle

VISION HIGHLIGHTS

- The most cost-effective video technology of the future
- Enhanced image usability and integration
- Unified mobility and “Access Anywhere” technology via the cloud
- Flexible and scalable options
- 60 days of storage for HDTV-quality video

REMOTE VIDEO RETRIEVAL & ARCHIVING SERVICE

Wachter will provide a [Retrieval and Archiving](#) of requested video clips. Upon request, Wachter will provide the requested footage and will store / archive all incidents for two (2) years from date of request.

ORCHID FUSION CLOUD-BASED FEDERATED SOFTWARE

[Fusion](#), the Wachter system software enhancement, provides a powerful VMS unification platform that offers the same ease of use and familiarity as Orchid VMS, but extends the platform across unlimited locations, cameras, and users.

Underpinning Fusion's advanced management and aggregation capabilities is Orchid VMS, a lightweight, cross-platform video recording solution that can be distributed across an almost endless variety of servers and IoT devices.

The Fusion web interface is hosted centrally via a secure cloud service — and in the event of a communication interruption, Orchid operates autonomously and continues to record, while remaining accessible via the standalone Orchid VMS user interface.

BACKDOOR REPORTING SERVICE

Wachter will provide [Real-Time Event Notification](#) on backdoor openings within a predefined schedule, as well as monthly aggregate exception reports.

Additionally, Wachter will install a dedicated camera and contact relay to monitor the back door(s) of the store, which are to remain closed and locked during non-delivery times (determined by client). This system system will then be configured to create an event video clip whenever the door is opened outside of the times specified for normal operations.

The event video will record one minute pre- and one minute post-event, and the system will send an email with this video clip to the customer, who can view the clip on a mobile phone or PC.

HEALTH MONITORING SERVICE

The Wachter system will provide [Real-Time System Health Monitoring](#) based on predefined event notifications.

The service will notify Wachter of events critical to system functionality and recording capabilities, so that Wachter can proactively diagnose and address potential issues.
